This program offers state-of-the-art lectures covering internal medicine and its subspecialties and is taught by faculty from one of the world's greatest teaching institutions. Through case-based reviews of clinical problems and the latest literature, it provides unbiased content and enhances your knowledge so that you may confidently incorporate the latest guidelines and recommendations into your practice. This comprehensive review fully prepares you for board certification and recertification exams with emphasis on the practical application of physiological principles to the understanding and management of clinical problems. It is intended for clinical and academic internists, pediatricians and primary care physicians/trainees preparing for ABIM internal medicine exams and/or seeking a wide-ranging update in internal medicine. It will help you to better:

- Apply current/recommended guidelines in clinical practice
- Describe pathophysiology as it applies to management of clinical problems
- Apply knowledge gained to the ABIM certification/recertification examinations
- Perform differential diagnosis of complex clinical presentations
- Review and interpret up-to-date literature relevant to clinical practice
- Identify/integrate current therapeutic options for specific disorders, including end of life care
